## OBJECTIVE

---

Senior Computer Science student at FAST-NUCES seeking remote or full-time opportunities in Full-Stack Web Development, Frontend Engineering, and AI Engineering. Experienced in building scalable, real-time web applications, data-intensive AI platforms, and seamless user interfaces using Python, React, Next.js, and FastAPI. Looking to leverage my cross-disciplinary skills to deliver high-performance, robust software solutions.

## EDUCATION

---

**Bachelor of Science in Computer Science**, FAST-NUCES 2023 – Present  
Relevant Coursework: Artificial Intelligence, Machine Learning, Data Structures & Algorithms, Linear Algebra & Probability, Database Systems, Software Engineering  
**Intermediate (Pre-Engineering)**, Bahria College Karachi Class of 2021  
Focused on Physics and Mathematics.

## SKILLS

---

|                              |                                                                             |
|------------------------------|-----------------------------------------------------------------------------|
| <b>Programming Languages</b> | Python, JavaScript (ES6+), C/C++, PHP, Bash                                 |
| <b>Web &amp; Deployment</b>  | React, Next.js, Django, Flask, FastAPI, HTML5, CSS3, Tailwind CSS           |
| <b>AI/ML &amp; Vision</b>    | PyTorch, TensorFlow, OpenCV, scikit-learn, Pandas, NumPy, LangChain, MLflow |
| <b>Databases</b>             | MySQL, PostgreSQL, SQLite, Neo4j, MongoDB                                   |
| <b>Tools</b>                 | Git, Docker, GitHub Actions, CI/CD, Vercel, AWS, Real-time Systems          |

## EXPERIENCE

---

**Teaching Assistant**, FAST-NUCES Feb 2026 – May 2026  
*Peshawar, PK*

- Assisted undergraduate students in Expository Writing to develop structured thinking and analytical communication.
- Evaluated assignments with technical feedback and reinforced software documentation principles.

**Information Technology Intern**, UBL Insurers Ltd Oct 2025 – Nov 2025  
*Karachi, PK*

- Supported core operational systems, SQL-based data workflows, and Active Directory-based access controls in a regulated corporate insurance environment.
- Assisted in multi-branch IT helpdesk operations and identified automation opportunities for underwriting workflows.

**Frontend Engineering Intern**, hwhelp.me Aug 2025 – Sep 2025  
*Doha, Qatar (Remote)*

- Built UI components with HTML5, CSS3, and Bootstrap for an ed-tech platform used across multiple countries.
- Connected PHP and MySQL backends for dynamic content rendering and user data handling.

**AI/ML Engineering Intern**, Advtrix Jun 2025 – Aug 2025  
*Karachi, PK*

- Built ML pipelines in Python and scikit-learn to predict lead quality, helping sales target high-value clients.
- Applied K-Means clustering for customer segmentation, cutting manual data-entry time by 40%.

**Private Tutor (Online)**, Guangxi Medical University May 2025 – Oct 2025  
*China (Remote)*

- Tutored 3–4 MBBS students in medical physics and calculus, tailoring custom lesson plans to improve academic performance.

**AI Software Engineering Fellow**, Headstarter  
*New York, US (Remote)*

Jun 2024 – Jul 2024

- Shipped 5 AI-powered apps under real deadlines during a competitive 5-week program.
- Built and deployed full-stack AI SaaS apps using Next.js, React, and OpenAI API via Docker and GitHub Actions.

## PROJECTS

---

### Veriflow: B2B Revenue Leakage & Invoice Auditing System

[GitHub](#)

Built a production-oriented dual-model machine learning compliance platform with SQLite to automatically monitor B2B transactions. Engineered an anomaly detection pipeline that analyzed over 5,500 transactions (\$21M+ volume), successfully isolating 86 extreme freight overcharge anomalies to eliminate corporate revenue leakage.

### Genetron (Spatial AI & 5G Optimization)

[GitHub](#)

Built a spatial AI platform using a custom NSGA-II genetic algorithm to optimize 5G tower placement. Engineered a vectorized signal propagation engine in NumPy. Led the React and D3.js frontend for real-time spectral heatmap rendering and scenario comparison, achieving 99.4% simulated coverage.

### RescueAI (Bilingual Emergency AI Platform)

[GitHub](#)

Built a real-time emergency response platform with a FastAPI async backend and React frontend. Integrated Groq LLaMA 3.3 70B for conversational AI and live voice transcription. Implemented one-tap SOS with GPS tracking and live ETA dispatch, deployed as a highly available decoupled architecture.

### Dishly (Recipe & Pantry Management)

Built a PHP/MySQL web app with a glassmorphism UI, social features, and a visual pantry tracker. Secured the backend with prepared statements, CSRF protection, and SQL injection prevention. Built an admin panel with Chart.js analytics and optimized performance via DB indexing and query caching.

## CERTIFICATIONS

---

- **NCEAC-HEC Generative AI Training (6-Week Program)**, PakAngels (2026)
- **NAVTTC Artificial Intelligence (ML, DL, Communication)**, Govt. of Pakistan (2026)
- **Python for Data Science**, Coursera/IBM (2024)
- **Machine Learning Specialization**, Coursera/Stanford (2023)
- **Full Stack Web Development**, Udemy (2023)

## LEADERSHIP & EXTRA-CURRICULAR

---

**President**, FAST Innovation Club

2025 – Present

- Lead club operations, set yearly goals, and represent the club to faculty, industry contacts, and external partners.
- Organize innovation events, workshops, and competitions to build problem-solving culture among students.
- Mentor peers at the FAST-NUCES coding club, running technical sessions on Python and React.
- Contribute actively to open-source AI/ML and web projects on GitHub while participating in online AI hackathons.
